

WIF

Work. Identity. Finance.

A platform for building and running AI employees and characters

The AI agent is becoming a new actor in the economy

Human

Works, builds a reputation and handles money.

Company

Pools people and capital. Can keep growing beyond the lifetime of its founders.

AI agent

Gets a goal, plans its own actions and does the work within the authority and budget it is given.

Every actor in the economy does work, has an identity and can handle finances: Work + Identity + Finance

AI agents need infrastructure and tools for work, for identity and for handling money.

All three of these markets are growing fast.

Work: AI agents are reaching hundreds of millions of dollars in revenue

Sierra

Agents for customer service.

>\$150M

ARR as of February 2026

Reached in the company's first two years.

Cursor

AI tools and agents for software development.

>\$1B

Annual revenue run rate as of November 2025

WIF is entering the AI agent market. We build agents for real work, deploy them inside companies and keep them running.

Billion-dollar valuations are reached in months

Cursor

Software development

5 months

\$9.9B → \$29.3B

June — November 2025

Valuation up roughly 3×

Harvey

Legal work

19 months

\$3B → \$15.5B

February 2025 — September 2026

Valuation up roughly 5.2×

Serving agents is a large business inside the sector

LangChain

Building, launching and monitoring agents for other companies.

\$1.25B

Company valuation · October 2025

\$125M raised.

Arize → Dynatrace

Quality evaluation and monitoring for AI applications and agents.

\$915M

Announced deal value · August 2026

Acquisition agreement signed.

Identity: agents run social accounts, create content and talk to an audience

Virtual influencers

\$11.2B

Global market estimate for 2025

The market for personas, technology and services that promote through digital characters.

Autonomous social accounts

Posts and replies

Already supported by elizaOS

The agent posts on X, follows the feed and joins conversations with users.

WIF works in the digital character sector: characters build their own audience and promote brands and products.

The GVR estimate covers CGI characters and services. It is not the size of the market for autonomous AI agents alone. Grand View Research: Virtual Influencer Market.
elizaOS: autonomous posting and conversation on X.

Content with AI characters already generates revenue

China Literature

>100M yuan

Revenue from AI-animated series

For the second half of 2025.

12 series

Each passed 100M views

Nearly 1,000 series released since the start of that period.

A character gains its audience through stories and content. The content becomes the product.

Voice and likeness technologies are becoming billion-dollar businesses

ElevenLabs

>\$330M

ARR · end of 2025

Voice and conversational agents.

Valuation rose from \$3.3B to \$11B between January 2025 and February 2026.

Synthesia

>\$100M

ARR · April 2025

AI avatars and video for business.

Valuation rose from \$2.1B to \$4B between January 2025 and January 2026.

Finance: the agent needs a budget, the business needs control over spending

Stripe: Revenue Suite

>\$500M

Annual revenue run rate · February 2025

Billing, invoicing and financial accounting.

Companies pay for tools that control and monetize usage.

Metronome

×8 in a year

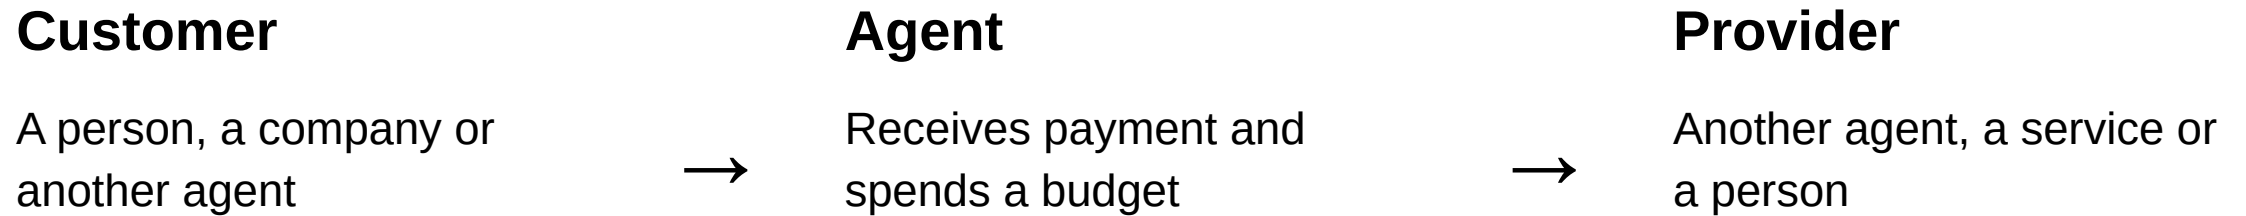

Growth in billed volume · December 2024 against 2023

Billing for OpenAI and Anthropic. \$50M raised in February 2025. Stripe acquired the company in January 2026.

WIF works in financial infrastructure for agents: usage accounting and invoicing today, budgets and settlements as it develops.

Agents can pay and be paid for services

x402 from Coinbase makes it possible to automate payment for digital services in stablecoins, including between agents.

\$3.5B — Visa's annualized stablecoin settlement volume as of 30 November 2025. This is not agent turnover.

The diagram shows a settlement scenario. Payments to people require the relevant services to be connected. Coinbase: x402 launch, 6 May 2025. Visa: Stablecoins Advisory Practice, 15 December 2025.

Payment giants are buying infrastructure for billions

Bridge → Stripe

\$1.1B

Deal value · according to Reuters

Stablecoin payment infrastructure. The acquisition closed in February 2025.

BVNK → Mastercard

up to \$1.8B

Announced amount · March 2026

Settlement in ordinary currencies and in stablecoins. The amount includes \$300M in contingent payments.

The WIF platform works where the three directions meet

Work

For doing the work

Tasks, knowledge and tools

Identity

For building relationships

Personality, memory and rules of communication

Finance

For managing a budget

Billing and settlements

The work, the identity and the agent's own financial infrastructure come together in one platform.

WIF: one platform, two ways to earn

We build products

For industries and brands

AI employees for business. Characters for communication, content and branded devices.

Launch + subscription + usage

We provide the platform

For developers and companies

Building and running their own agents and characters on WIF technology.

Access + service consumption

One shared WIF technology platform.

Products help grow the platform, the platform widens the market

01 Products for clients	We solve tasks for industries and brands. We earn revenue and deployment experience.
02 Shared technology	We reuse our own technology, while clients keep the rights to their products and data.
03 Other companies' agents	Clients launch their own agents. Platform usage grows.
04 Recurring revenue	We are paid for the products and for the use of WIF services.

The people behind WIF: Ocean Tech

60+ employees at Ocean Tech: researchers, engineers and product designers

Research	Behaviour of models and autonomous agents on real business tasks.
Engineering	Enterprise deployments, integrations, high-load services and Web3.
Ocean Framework	Multi-agent architecture, memory, monitoring and access control.

The WIF team

Chief Executive Officer, founder

Entrepreneur in technology.
Buckswood School, MIRBIS, MBA
MGIMO.

Konstantin Moroshin

Head of the Research Centre

Projects for MTS Red, CROC,
Innostage, Sber. 10+ years of
enterprise IT sales.

Sergey Kovalev

Managing Partner

Entrepreneur and strategist with
experience in artificial intelligence
and Web3.

The WIF team: AI employees

Visual slide: the original carries only the title.

The Ocean Tech virtual office

Visual slide: the original carries only the title.

18 months to a target valuation of \$1B

0–3 months · Launch

We strengthen the team.
We launch agents for
clients on top of platform
modules.

3–6 months · First clients

We test payment and
the reuse of modules in
client projects.

6–12 months · International growth

We scale the product,
sales and partnerships
in the US and Europe.

12–18 months · Next round

We go to investors with
results in sales and in
platform usage.

AGI and robots widen the future market for WIF

AGI

More general intelligence will let agents be given more complex work.

Robots

A physical body will let agents act outside the digital environment.

The WIF bet is that the more agents can do, the more they need tools for work and for settlement.

Today, existing demand. The long-term goal is a platform for autonomous agents with its own global settlement network.

Investment and partnership in WIF

The investor takes a stake in the company that builds the whole WIF platform.

Capital	Platform development, the team and going to market.
The partner's companies	First tasks and industry expertise. The companies get solutions for their own processes.
Access to the market	Deployment results help us reach the next clients in the industry.

Next step — discuss participation and choose the companies for the first deployments.
